SONOGRAPHY REPORT

NAME : MR. NAUSHAD ALI
AGE & SEX : MALE
REFERRED BY : DR. M.S. MANSOOKI, MS.
17/12/2013

Whole Abdomen Sonography

The liver is marginally enlarged mes. 17.9 cm. in mid clavicular line. Liver reflectivity is raised, showing grade I fatty infiltration. Echopattern of portal and hepatic veins is normal. Extra and intra hepatic biliary radicles are undilated.

The gall-bladder is of normal size, shape and echostructure and is non-lithiasic.

The pancreas and spleen are of normal size, shape and echostructure.

Both kidneys are in normal position. Renal contours are smooth. Renal parenchymal echostructure is normal. Cortical echos are normal. Cortico-medullary difference is fairly maintained.

A small calculus mes. 4 mm. seen in lower calyx of right kidney.

Tiny concretion in lower pole of left kidney.

Mild hydronephrosis, hydroureter of left kidney, secondary to a hyperreflective calculus mes. 8 mm. seen in left lower ureter, at the level of pelvic-brim.

Echopattern of IVC and aorta is normal.

No evidence of free ascitic fluid or lymphadenopathy seen in abdomen.

The urinary bladder contour is normal. The walls are thin having echofree content.

The prostate is of normal size, shape and echostructure.

IMPRESSION: - MILD HEPATOMEGALY, SHOWING FATTY INFILTRATION.
- SMALL RIGHT RENAL CALCULUS.
- TINY LEFT RENAL CONCRETION.
- LEFT LOWER URETERIC CALCULUS.
